

San Isidro Primary School Proximity

A Spatial Network Analysis of Pedestrian Access to Public Primary Education

Santiago Mena Saravia
August 20, 2026

Slide 1 of 4

Why Primary Education?

Pedestrian accessibility as a core pillar of educational equity.

WHY PUBLIC PRIMARY SCHOOLS ARE THE OPTIMAL UNIT OF ANALYSIS FOR PROXIMITY

01. Early School Mobility

- Different from secondary students.
- Children ages 6-12 depend on adult accompaniment.
- Rely on short pedestrian commutes.
- Walking commutes exceeding 10-15 minutes directly impact absenteeism.

02. Social Cohesion & Inclusion

- Public schools acts as the main community integration network.
- Crucial social safety net.
- Key focus in areas with high Unsatisfied Basic Needs (UBNs/HBIs).

03. Geographic Efficiency

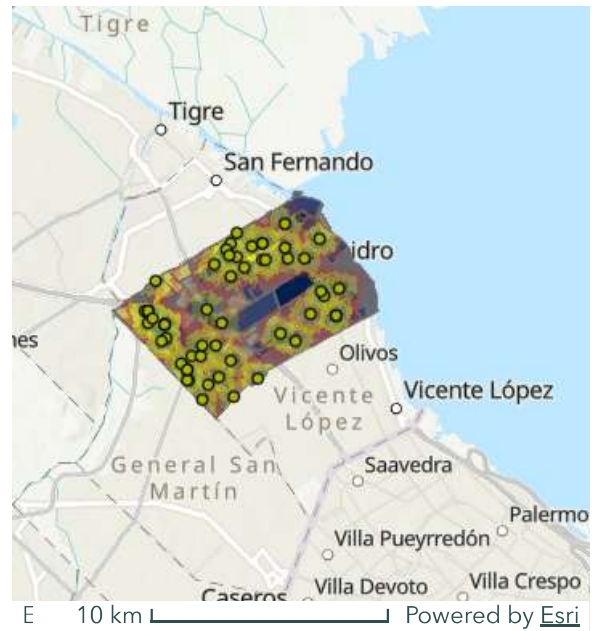

- Focusing on a single educational level ensures spatial precision.
- Measures actual pedestrian catchment area coverage.
- Avoids distorting the operational capacity of school infrastructure.
